- KCDC released the results of epidemiological investigation on 25<sup>th</sup> and 4<sup>th</sup> confirmed cases.
- The 25<sup>th</sup> case, a 73-year-old Korean female, developed fever, cough, sore throat on 6 February. She went a local screening center(triage clinic center of 2019-nCoV) and tested positive and isolated at national designated hospital.
  - Even though she has no travel history to China, she has been staying with her family(son, daughter-in-law) who returned from Guangdong province in China on 31 January. As her daughter-in-law developed cough on 4 February, she are currently in isolation and epidemiological investigation is underway.
- The 4<sup>th</sup> case, 1 55-year-old Korean male, tested negative twice after the improvement of symptoms, and he discharged from hospital today. The case returned from Wuhan, China on 20 January. After confirmed on 27 January, he has been treated for pneumonia.
